## Course overview

Straumann® Pro Arch full arch rehabilitations were designed to enable personalized treatment of edentulous patients, taking into account each individual's expectations, clinical situation, and financial capabilities.

Patient-specific treatment protocols are based on the vast experience and anatomic classification developed by Prof. João Caramês, who host the meeting.

## Learning objectives

The learning objective of the course is to provide theoretical training and practical experience to successfully manage immediate loading treatment according to the Straumann® Pro Arch surgical and restorative protocol.

The program will include discussions about modern technologies, surgical and prosthetic techniques, and clinical evidence in the field of immediate full arch restorations.

The team of experts from the Implantology Institute will lead the conversations and will answer the questions. The course will take place for one and a half days (minimum 12 hours lectures).

## Course topics
